Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-5, 9-11, 13, 14, and 16-18 are rejected under 35 U.S.C. 102(a) as being anticipated by Maestro '777. Maestro '777 discloses, Figs. 2 and 3, an end cap for arch shaped leaching chamber comprising an end flange 12 which may connect with a leaching chamber, base flange 49, a shell, (the general body), and at least two buttresses 38 facing in different direction relative to an x-axis. The end cap can be seen as possessing a continuous curved convex exterior. A "transition area" is any portion of the body connecting the shell, (or any portion of the body), to the end flange 12. Step or saddle of displaced surface is at 60. Sub saddle is formed by corrugation of 39, which would present a two-step buttress or planar surface. Means for receiving a splash plate is any portion of the flange 12. The end cap has corrugations 16/17 running transverse to the x-axis. Buttresses run upwardly from the base flange, (particularly if including portions 16 on either side). Portions 38 constitute planar panels.

Application/Control Number: 10/677,771

Art Unit: 3673

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 12 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Maestro '777 in view of Gray.

Gray teaches formation of ports including planar panels, which can be manually cut or torn to form a hole for receiving a pipe, col. 5, lines 8-12. To have provided the Maestro '777 end cap ports, (buttresses), with planar panels which can be manually cut or torn to form a hole for receiving a pipe, thus allowing selective use of any specific port, would have been obvious to one having ordinary skill in the art at the time the invention was made as taught by Gray.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Maestro '777 in view of Nichols et al.

Nichols et al. teaches formation of end ports 38 facing in an x-direction of the end cap 26/20. To have provided the Maestro '777 end cap with a port, (buttresses), facing in an x-direction of the end cap, thus allowing selective use of any specific port facing any given direction, would have been obvious to one having ordinary skill in the art at the time the invention was made as taught by Gray.

Art Unit: 3673

Claims 7, 8, and 15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to M. Safavi whose telephone number is (703) 308-2481. The examiner can normally be reached on Mon.-Thur., 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Heather Shackelford can be reached on (703) 308-2978. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
